

BENEFITS OF ALKALINE WATER

- Your body absorbs calcium and magnesium from water 30% easier from water than it does from food.
- Studies have shown a positive link between alkaline water and heart health, bone health, and digestive health.

WATER & WEIGHT LOSS

- A glass of water a half hour before meals has been shown to make you feel fuller, and help you eat less.
- Proper hydration is necessary to maintain your metabolism. If your body becomes dehydrated, your metabolism will slow down.
- Alkaline water's sweet refreshing taste helps you choose water over fattening or dehydrating beverages.
- Cutting calories is not enough! This is why diets often fail.
- Exercise produces acids in the body, such as lactic acid. Many acids are released through perspiration, but some are retained by the system, causing pain in muscles. Drinking alkaline water aids in faster recovery by through re-hydration so your body can flush lactic acid from your muscles.
- Did you know? One glass of water shuts down midnight hunger pangs for almost 100% of the dieters studied in a University of Washington study.

ALKALINE WATER ASSOCIATED WITH ANTIOXIDANT PROPERTIES

- Alkaline water combined with a proton-donor such as Vitamin C gains potent antioxidant properties due to its negatively charged ionic structure.
- Getting older and aging is not the same thing.
- Aging relates to the breakdown of tissues in the body.
- The free radical theory of states that aging is accelerated by many factors, some of which are time and damage to bodily tissues by organic acids and by active oxygen (free radicals).
- Drinking ionized alkaline water mixed with a proton donor like Vitamin C can supply your body with antioxidants.

ALKALINE WATER IS SUPER-HYDRATING

- Research indicates that 8-10 glasses of water a day could significantly ease back and joint discomfort for up to 80% of sufferers.
- A mere 2% drop in body water can trigger fuzzy short-term memory, trouble with basic math and difficulty focusing on the computer screen or on a printed page.
